Campus management: Product catalogue

Solutions, software services and equipment for Indian colleges.

What this document is

A practical catalogue for college offices planning attendance, examinations, fees, library, transport, hostel and facilities services. The complete range is available. Choose the software and equipment your college needs.

Software is licensed by service or bundle. Setup and installation are included. The college owns and buys the necessary hardware and pays provider bills directly.

> Figures are indicative. The written quotation and service agreement confirm scope, capacity, equipment, support, acceptance checks and applicable taxes.

Choose what your campus needs

A complete range of campus solutions, with a clear scope for your college.

Daily campus work

Administration, attendance, timetables, staff duties and student applications support the work of the office and classroom.

Equipment: Required campus servers, network and protected power, with supported phones.

Academic and student services

Library, examinations, fees, transport, notifications and reporting are available according to the services your college selects.

Equipment: Compatible counter computers, scanners, screens and tracking devices where the selected workflows need them.

Campus facilities

Hostel, mess, electricity and water workflows connect resident services, meal counts and facilities monitoring.

Equipment: Directional readers, counter terminals, meters and sensors, based on a site survey.

> Agree software selections, equipment, responsibilities and acceptance checks in the written proposal. Electrical work needs qualified staff and a safe maintenance window.

Campus operations

Attendance Management

Open a class attendance request, review corrections and calculate shortage lists from the accepted marks.

- **Class marking:** The lecturer opens a class session. Students respond to its QR or OTP request.
- **Shortage lists:** Use conducted lectures and accepted marks to calculate attendance against the college's threshold, such as 75%.

How it helps

Lecturers can keep marking and correction requests together. Counts come from the session records. Mistakes follow the college's correction process.

> **What you need:** Software: Campus Administration, Faculty and Staff Applications, Student and Parent Applications. Use supported lecturer phones. No dedicated attendance terminal is required. Printed student ID cards and a staff fingerprint reader are optional.

Exam Hall and Exam Cell Management

Prepare schedules, eligibility, hall tickets and seating. Authorised staff control publication.

- **Schedules and registration:** Match each student to the papers, dates and halls for their examination.
- **Eligibility:** Calculate attendance shortages for exam-cell review instead of rebuilding the list by hand.

How it helps

The exam cell connects eligibility, registration and seating instead of reconciling three separate lists. Staff can check the proposed arrangement before publication.

> **What you need:** Software: Examination Services, Campus Administration. Add Exam Cell to Core Operations without Library or choose Full selection, which includes both. Prepare the supported examination checking equipment and campus installation. Use a supported phone or an optional hall verification screen for door checking. Printed student ID cards are optional. Prepare the day's checking data before an outage.

Campus operations

Bus Tracking and Student Boarding

See bus position, boarding and exit records and who is still expected on the current trip.

- **Bus position:** Show reported location on a map for the transport in-charge. Current updates depend on device power, location reception and connectivity.
- **Boarding and exit:** Record students getting on and off against the current trip, with a mark-by-hand option when scanning fails.

How it helps

The transport in-charge can check a bus's reported position before calling the driver. Drivers have a manual fallback for boarding, with exceptions left for the office instead of holding up a student.

> **What you need:** Software: Library and Transport Services, Student and Parent Applications. Select Transport software. Paid transport passes also require Finance. Student and parent access depends on the applications selected. Choose a supported driver phone with a secure mount or a fitted tracking unit, per bus. Fitted units need a SIM plan. Equipment and mobile data are college costs.

Hostel and Mess Management

Manage rooms, hostel entry and exit and meal counts. Estimate meal numbers from your college's records.

- **Rooms and allocation:** Keep blocks, room capacity, occupancy and resident allocation together.
- **Entry and exit records:** Record entry and exit separately so movement has a clear direction.

How it helps

Wardens can review occupancy and recorded late returns together. An incomplete scan history calls for follow-up rather than an automatic conclusion about a resident.

> **What you need:** Software: Campus Administration. Select Hostel movement and Mess software. Automated meal charges also require Finance; counting and reporting remain available without billing. Use two card readers per hostel doorway, one for each direction and a supported mess counter terminal. Survey doorway layout, queue flow and protected power before procurement.

Campus operations

Electricity and Water Monitoring

Read electricity meters and tank levels, review alerts and check local pump protection.

- **Meter readings:** Collect readings automatically from the selected circuits and large loads.
- **Demand alerts:** Warn as recorded demand approaches the college's contracted limit.

How it helps

Estate staff have readings and history to consult before inspecting a suspected problem. Alerts point to a condition to check; a flow advisory alone does not prove there is a leak.

> **What you need:** Software: Campus Administration. Select Energy and Water software for the monitoring scope required. Hardware, electrical work and provider costs are college-owned separately. A site survey defines meters, tank and pump sensors and the campus collection unit. An electrician and a planned shutdown window are required. Equipment is quoted after the survey.

Library Management

Catalogue, loans, returns and reservations. Give the library counter and its readers one clear record.

- **Catalogue:** Manage titles, individual copies, shelf locations and searches for available books.
- **Issue and return:** Scan a book at the counter and record its loan or return against the reader.

How it helps

The librarian works from one circulation record when checking due dates, handling a return or responding to a reservation. Repeated calculations and copying between a desk register and a spreadsheet are reduced.

> **What you need:** Software: Library and Transport Services. Library can be added to Core Operations and is included in Full selection. Prepare the supported counter equipment and campus installation. Enterprise follows its agreed scope. Use a supported counter computer. A barcode scanner is optional; confirm compatibility during setup. The college prepares its catalogue and book labels.

Campus operations

Campus Entry and Visitor Management

Keep a searchable gate record and a clear visitor register, separate from classroom attendance.

- **Campus entry:** Record identified arrivals at the gates included in the installation.
- **Daily counts:** Show the day's recorded entries to authorised office staff.

How it helps

Security staff can keep the visitor's purpose and host alongside the time of arrival. Recording departure completes the visit when the guest leaves.

> **What you need:** Software: Campus Administration. Choose readers for the gates in scope and compatible printed student ID cards where needed. Confirm gate locations, power, network and the security desk arrangement.

Fee Counter and Payment Operations

Keep fee demands, student payments and receipts together, with a clear process for cash taken during an outage.

- **Fee structures:** Maintain programme, year and category rules, including applicable SC, ST, OBC and EWS categories.
- **Student demands:** Show what is due, what has been paid and the remaining balance.

How it helps

Accounts staff can follow a demand through payments and receipts. Daily totals are available from recorded transactions, reducing the need to add up a separate counter register.

> **What you need:** Software: Campus Administration, Student and Parent Applications. Finance software is required, as a priced addition or included in Full selection. Payment-provider transaction charges are separate. Use a supported office computer and printer for counter work and provisional cash slips. Agree payment-provider arrangements directly with the provider.

Software your college licenses

Campus Administration

A shared office panel for departments, classes, people, timetables, notices and approvals.

- **College records:** Maintain programmes, years, sections, subjects and the people connected to them.
- **Roles and access:** The Principal controls who may do what. Staff see the work their role permits.

How it helps

Office staff work from shared class and people records instead of maintaining the same list for several services. Changes become easier to check because the office knows which record to update.

> **What you need:** Included in Core Operations and Full selection. Other services use these common college records; it is not a separate addition. No extra device is required.

Faculty and Staff Applications

Attendance, timetable, duties and leave on supported staff phones, with access matched to each person's role.

- **Class attendance:** Open a QR or OTP attendance request for an assigned class. Use authorised card or manual marking when needed.
- **Timetable and lists:** See today's schedule, the week ahead and student lists for the lecturer's own classes.

How it helps

Lecturers can keep marking, schedules and correction requests together. They have less attendance arithmetic to repeat at the end of term and can refer to the recorded session when something needs review.

> **What you need:** Faculty applications and basic duty records are included in Core Operations. Full SOP and Worker workflows can each be added to Core Operations or are included in Full selection. Driver workflows require Transport. No extra device is required.

Software your college licenses

Student and Parent Applications

Give students their own academic information and enable read-only parent access when your college chooses.

- **Attendance and timetable:** Students see their attendance, class schedule and progress against the college's attendance threshold.
- **Fees:** With Finance selected, students review dues, payment history and online payment. Parent fee and receipt views are read-only.

How it helps

Students can inspect their own information before visiting the office. An attendance query can refer to a particular record and a published hall ticket is available through the application.

> **What you need:** Student applications are included in Core Operations. Parent access is configured when requested, without a separate activation charge. Finance, Exam Cell, Library and Transport features need the corresponding software. No extra device is required.

Library and Transport Services

Library circulation and transport software, available as individual additions to Core Operations or included in Full selection.

- **Catalogue and circulation:** Manage titles, copies and shelves, then record issues and returns at the counter.
- **Routes and passes:** Maintain routes, stops and pass status. Paid passes require Finance.

How it helps

Librarians can follow a copy from issue to return without keeping a parallel register. Students can see their loans and check availability through the enabled application.

> **What you need:** Library and Transport are individual additions to Core Operations and are both included in Full selection. Library needs a prepared counter; paid Transport passes also require Finance. Exam Cell can be selected separately. Library uses a supported counter computer with an optional compatible barcode scanner.

Software your college licenses

Examination Services

Software for schedules, eligibility, hall tickets, seating and controlled publication of college results.

- **Schedules and registrations:** Connect papers, dates and halls to the students registered for each examination.
- **Eligibility:** Calculate attendance shortages for review using the recorded class sessions.

How it helps

Exam-cell staff can review eligibility, registration and seating together. They have fewer separate lists to reconcile before publishing a hall arrangement.

> **What you need:** Select the Exam Cell addition to Core Operations or choose Full selection. Library is not required just to use examinations. Fee collection also needs Finance. Use a supported exam-cell computer and a supported phone or tablet for checking.

Duties and SOP

Assign staff duties, attach the college's approved instructions and track completion.

- **Duty assignment:** Assign work to the responsible staff member and include its instructions.
- **Staff access:** Make the assignment available in the relevant staff application, with notification delivery according to the selected service.

How it helps

Office staff can refer to one assignment and its completion record instead of piecing together duty slips and informal messages. The attached procedure helps clarify what the assignment requires.

> **What you need:** Core Operations includes basic duty and leave records. Full SOP and Worker workflows are separately priced additions to Core and are both included in Full selection. Notification delivery and provider usage depend on the services selected. No extra device is required.

Software your college licenses

Notifications and Communication

Deliver app alerts and SMS to the right college audience, with reusable templates and a sending record.

- **App alerts:** Deliver messages to enabled Faculty, Student, Driver and Worker apps. Parent app push alerts are not supported.
- **SMS:** Send through the college's configured provider account, with provider usage billed separately.

How it helps

Office staff can address a specific audience without reconstructing a contact list for every notice. Templates reduce repeated typing while leaving the message's purpose and recipient selection clear.

> **What you need:** Core Operations includes ordinary notices. Select the Notifications addition for delivery workflows. Related reminders need their source service and the college pays provider usage directly. No extra device is required.

Reports and Analytics

Review attendance, results and accreditation reports. See which student records may need staff attention and why.

- **Attendance trends:** Review recorded attendance by department, class, subject and teacher.
- **Results analysis:** Examine pass rates and subject patterns using published, available examination records.

How it helps

Office teams can assemble repeated reporting from records the college already maintains. This reduces copying between registers and spreadsheets, while leaving staff responsible for checking the information before submission.

> **What you need:** Select the Analytics addition to Core Operations or choose Full selection. Reports use the services and validated records available to your college; the basic Principal overview remains part of Core Operations. No extra device is required.

Equipment selected by service

Equipment is bought separately by the college. It requires the selected software and campus infrastructure.

Student ID Cards

An optional printed college card for supported attendance, examination, library and entry workflows.

Equipment role: Optional. Use a printed card where it provides a practical alternative to a student's phone.

> **Required software:** Campus Administration maintains student identity. Each use also needs its selected software: Exam Cell for examinations, Library for borrowing and returns and the relevant attendance or entry service.

Exam Hall Verification Screen

An optional tablet or camera-equipped screen for checking a student's hall ticket at the examination entrance.

Equipment role: Optional. An invigilator can check hall tickets with a supported phone instead of a dedicated screen.

> **Required software:** Exam Cell software is required, with Campus Administration. Buying a screen does not include software. Add Exam Cell to Core Operations without Library or choose Full selection, which includes both.

Bus Tracking Unit and Door Scanner

Optional fitted tracking and boarding devices, with a supported driver phone as an alternative for bus position.

Equipment role: Optional. Choose a supported driver phone or fitted tracker per bus. Door scanners are a separate equipment choice.

> **Required software:** Transport software is required. Paid transport passes also require Finance. The Library service is a separate inclusion and is not required just to track a bus.

Equipment selected by service

Equipment is bought separately by the college. It requires the selected software and campus infrastructure.

Staff Biometric Reader

An optional fingerprint reader for staff duty attendance, with enrolment choice and office-reviewed corrections.

Equipment role: Optional. This reader records staff duty attendance; student class attendance remains with the lecturer.

> **Required software:** Campus Administration provides staff records and the duty-attendance workflow. The reader requires this software and the agreed campus infrastructure.

Campus and Hostel Entry Readers

Readers for campus entry records and hostel entry and exit, selected for each doorway in scope.

Equipment role: Required for reader-based entry records. Hostel movement needs two readers per doorway, one for each direction.

> **Required software:** Campus Administration supports campus entry records. Hostel movement also requires the Hostel software addition. Entry hardware does not include either licence. A site visit confirms the equipment specification.

Mess Counter Terminal

A supported terminal at each serving counter for meal counts, with billing enabled only through the required software.

Equipment role: Required at each serving counter included in the automated meal-counting workflow.

> **Required software:** Mess software is required with Campus Administration. Automated meal charges also require Finance. Counting and reporting remain available without billing. A site visit confirms the equipment specification.

Equipment selected by service

Equipment is bought separately by the college. It requires the selected software and campus infrastructure.

Energy Meters and Water Sensors

Meters, tank sensors and pump monitoring selected through a site survey for the college's electricity and water systems.

Equipment role: Required for the electricity and water monitoring points selected after a site survey.

> **Required software:** Energy and Water software are selected for the monitoring scope required, with Campus Administration. Equipment, electrical work and provider charges are separate. A site visit confirms the equipment specification.

Campus Server Equipment

Required local equipment, network and protected power for the college's selected software and prepared campus workflows.

Equipment role: Required campus infrastructure. Capacity follows student numbers, selected services and the agreed operating scope.

> **Required software:** Campus Administration provides the common foundation. License every other service your college will use; buying server equipment does not activate software. A site visit confirms the equipment specification.

During an internet outage

Offline work depends on healthy campus power, network, equipment and services. Test the actual workflows during acceptance.

Can continue on campus	Needs connectivity or separate review
Attendance using existing valid sessions and the local campus network.	New sign-in, mobile MPIN unlock and cloud services.
Library issue and return at a prepared local counter.	Remote access and updated cloud views.
Provisional cash slips from a prepared local fee counter.	Final receipts after Finance checks and accepts the payment. Online payment confirmation needs the provider.
Prepared exam-door verification, gate records and mess-counter workflows.	External notifications and live remote transport position.
Local facilities controls included in the installation plan.	Synchronization and provider-dependent actions wait for a usable connection.

Before handover

Disconnect the internet during acceptance. Confirm local records remain available and accepted work is retained. Restore the link and check that pending records synchronize correctly.

> A local power or network failure is different from an internet outage. Protected power, prepared equipment and supported operating procedures remain necessary.

Software and ongoing support

Choose a subscription or a one-time software project.

Software subscriptions

Core Operations covers daily administration, records, timetable, attendance, duty and leave records, notices and Faculty and Student apps. Full selection adds all 13 additions, including Library, full SOP and Worker workflows.

Choose monthly, six-month or annual payment; the selected term is paid upfront. Standard support, updates, monitoring and backup operations are included during the selected term. Prepaid discounts apply to recurring software only.

Enterprise: a one-time project

Agree the required services and custom features, modules or applications within the software project budget. Pay 20% after scope approval and before work begins. Pay 80% after all agreed setup, development, testing, training and handover are completed and accepted.

Paid-up use of the delivered software and ongoing standard support, maintenance and updates are included. There is no recurring software licence, renewal, maintenance or support fee for the delivered scope. Later custom development has its own written scope and budget.

Enterprise has no fixed list price and no subscription term discount. The written quote records the agreed software price, acceptance criteria, support contacts and response hours.

Included in every package

Setup, configuration, software installation, agreed migration, training, commissioning and standard support. No separate setup, installation or activation bill.

> Hardware, physical works, hosting and other provider bills remain college expenses. All software amounts exclude applicable taxes. Confirm capacity, dates and responsibilities in writing.

College procurement and responsibilities

College responsibility	What to plan
Hardware	Required campus computers and selected readers, screens, meters, sensors and other devices.
Physical works	Qualified electrical and civil contractors, protected power, mounting and the agreed shutdown window.
Provider accounts	Cloud, storage, broadband, connectivity, SMS, payment and other selected provider usage.
Data preparation	Accurate student, staff, department and class records; library records where selected.
Applicable taxes	Confirmed statutory treatment on the written offer and invoice.

Prepare before installation

Name a responsible college administrator. Confirm secure equipment space, network coverage, power protection and broadband. Agree the data import, training and acceptance schedule.

> Hardware and provider usage do not enter the software subtotal. Supplier budgets and physical-work estimates belong in the college procurement plan.

Current software prices

Per college, in INR. Effective 14 November 2026. Before applicable taxes.

Plan	Monthly	Six months	Twelve months
Core Operations	₹14,890.00	₹81,299.40	₹1,41,157.20
Full selection	₹31,890.00	₹1,74,119.40	₹3,02,317.20

Prepaid discounts: one month 0%; six months 9%; twelve months 21%.

Additions to Core Operations

Service	Monthly addition
Library	₹3,490.00
Full SOP	₹2,490.00
Worker workflows	₹1,490.00
Finance	₹3,490.00
Exam Cell	₹2,475.00
Transport / Driver	₹3,285.00
Notifications	₹1,690.00
Analytics and accreditation reports	₹2,485.00
Staff AI document assistant	₹2,875.00
Hostel movement	₹1,875.00
Mess	₹1,675.00
Energy	₹3,485.00
Water	₹2,785.00

Full selection includes Core Operations and all 13 additions, including Library, full SOP and Worker workflows. At or above its monthly price, a smaller package with additions resolves to Full selection; expanded inclusions are confirmed before acceptance. Paid Transport and automated Mess charging require Finance. Setup, installation and standard support are included. No hardware or provider prices are quoted here.

What is not claimed

No invented deployments

Customer names, logos, testimonials, case studies and performance results are shared only when verified and authorized. Availability of a demonstration does not certify a completed installation.

No certifications claimed

No ISO certification, MSME registration, GeM registration or Startup India recognition is claimed. State any tender requirement at the first conversation so eligibility can be addressed before procurement proceeds.

No savings figure before measuring

A campus energy or water saving cannot be stated in advance. An estimate requires 60 to 90 days of readings from that campus and an agreed comparison.

Acceptance belongs to the college

Review the actual workflows, equipment, data preparation and support agreement. A written service contract records the checks and responsibilities.

Start with the work your office does

Ask for a demonstration

A demonstration takes about forty minutes, using your department and class names. Nothing has to be installed to watch it.

Ask for a written proposal

Request the selected software as named lines, setup and installation included, the required college-owned equipment and provider accounts, capacity, support and acceptance checks.

Arrange a site visit

Validate the campus network, equipment space, protected power and selected facilities. Confirm the selected workflows and the agreed installation plan.

> Revision: 15 November 2026. Software figures effective 14 November 2026. Figures are indicative, before applicable taxes and are not a quotation.
